Product Name: **CALCIUM FORMATE**

Calcium Formate is an additive designed to significantly improve the qualities and properties of tile adhesives. As an additive it prolongs open time, improves adhesion and is a highly efficient strength accelerator which is of importance for tile mortars where acceleration and low skin formation is required. Further benefits include improvement in water stability, pliability and homogeneity. Calcium Formate is used as a cure accelerator in concrete where water stability is also improved. Calcium Formate is a white free flowing powder.

Chemical Composition :

Calcium formate

Cas no:544-17-2

Physical Chemical Characteristics

Appearance: White free flowing powder

Bulk density (kg/m3) : 850-1200

Applications

- ▶ Tile adhesives
- ▶ Concrete
- ▶ Fertilizers and leather tanning

Package:

25 kg paper bag 1.050 kg on pallets

Storage

Calcium Formate should be handled to prevent moisture absorption.

Store in its original packaging at low temperature, preferably below 30 °C, to avoid cake formation. Stacking pallets during storage could increase the risk of caking. Shelf life: 24 months

The above information is the result of repeated tests performed in our laboratories. However, they are released without any warranty whatsoever and do not exempt the customer from performing the tests for the final application. The recommendations contained herein are no guarantee or imply the suitability of the product for the particular uses of customers.
